PROJECTS

Smart Accident Detection & Alert System | GitHub

March 2026 - May 2026

- Architected an IoT-based accident detection system using an **ESP32**, vibration sensor, GPS, and GSM module to automatically detect potential accidents and trigger emergency alerts.
- Engineered a real-time alert workflow that provides a **10-second cancellation window**, reducing false alerts before automatically sending an emergency SMS to a predefined contact.
- Integrated the **NEO-6M GPS module** to capture real-time location coordinates and generate location details for emergency notifications.
- Developed GSM-based communication using the **SIM800L module** to deliver accident alerts and location information, enabling faster emergency response without requiring manual intervention.
- Designed a centralized embedded system integrating **5+ hardware components**, including a vibration sensor, GPS, GSM module, buzzer, and cancel button, with common communication and control logic.
- **Tech Stack:** ESP32, Arduino IDE, C++, NEO-6M GPS, SIM800L GSM, SW-420 Vibration Sensor, TinyGPS++ Library

CERTIFICATES

- C Programming | [iamneo](#) May 2026
- Data Science For Beginners | [Cisco Networking Academy](#) Apr 2026
- Introduction to Artificial Intelligence & Machine Learning | [Infosys Springboard](#) Apr 2026
- Introduction to Data Science | [Board Infinity](#) Jan 2025
- Effective Time Management | [Tech Veda](#) Oct 2025

ACHIEVEMENTS

- Solved more than **100+** programming problems on online coding platforms during regular practice and learning.

EDUCATION

- **Lovely Professional University** Phagwara, Punjab
Bachelor of Technology - Computer Science and Engineering; **CGPA: 8.47** 2025 - Present
